

Ensure a weather tight seal with Emseal®, a self-adhering, flexible foam sealant which expands to fill contours and gaps. Use Emseal® to seal out dust, air, wind-driven snow and moisture through joint details in metal buildings and roofs. Suitable for use against metal, plastic, wood, concrete and other common metal building structures. The Emseal® expanding sealant is UV-stable and will not dry out and become hard or brittle. The expanding foam sealant maintains a seal during thermal expansion and contraction of building panels. The sealant has a self-adhesive on one side. After removal of packaging, the material begins gradual expansion. Durable and versatile solution for difficult to seal areas.
