

A quick and easy spacer material to use when installing a metal roof over existing shingles instead of unreliable and stiff wood lathing. Quicklath™ is strong and lightweight, high density polyethylene foam which will not warp or corrode and is easy to cut with a knife. Quicklath™ is ideal for re-roofing and is used as a spacer between the roof materials providing air flow and ventilation.

- Cross linked polyethylene
- Use multiple layers to even out existing roof inconsistencies
- Allows airflow and ventilation between the old and new roofing material
  - Creates smoother roof panels (no warped wood spacers)
    - Very easy to use and cuts easily
- Use in place of wood furring strips
